CLASTIC FIELD SEDIMENTOLOGIST
CASP a not-for-profit Charitable Trust

If you love fieldwork, are looking for a friendly working environment and relish stimulating scientific discussions and challenges, this may be the opportunity for you.

CASP is a geological research organisation that is affiliated to the Department of Earth Sciences at the University of Cambridge. Funded almost entirely by the international hydrocarbon industry, CASP is widely valued by its sponsors for combining original field-based research in remote areas with innovative regional synthesis.

We are seeking to recruit a motivated field geologist with a broad geological background and an ability to investigate the evolution of sedimentary basins from a siliciclastic sedimentological viewpoint. Applicants will be conscientious, competent field geologists that have completed a PhD and preferably a period of post-doctoral research.

This permanent position requires the ability to work in a team, to interact with academic and industry contacts, and to take responsibility for project and research development. As well as writing reports for company sponsors, all CASP geologists are required to present their results at workshops and conferences and are strongly encouraged to publish their research and to develop and maintain an academic profile.

Salaries are broadly in line with the University of Cambridge scales (Grades 7-8) and include additional benefits. For further details about CASP, please visit: www.casp.cam.ac.uk

Please send a CV (naming 2 referees) and a covering letter explaining your motivation to joanna.hall@casp.cam.ac.uk

The closing date for applications is 12th, January 2019. Interviews will be held during the week of 4th, February 2019. Only applicants invited to interview will be contacted; this will be before 26th, January 2019. Open only to candidates who have the right to work in the UK.
